

# ACETA PLUS

**Chelates**

## Complexed Calcium solution.

### GUARANTEED ANALYSIS

Calcium oxide (CaO) soluble in water : 8,5% = 11,05% w/v.

Calcium oxide (CaO) complexed using AHG : 8% = 10,4% w/v.

### GENERAL FEATURES

**ACETA PLUS** corrects Calcium deficiencies via foliar application or fertigation. Its main feature is that Calcium has been complexed using Heptagluconic Acid, which derives from glucose, making the absorption of this product via foliar application or through fertigation much more effective than the rest of fertilizers containing Calcium.

**ACETA PLUS** corrects deficiency diseases caused by the absence of Calcium. Its application results in an improved production, quality, and setting of the fruits, as well as a longer shelf life. It is recommended for persimmon, to prevent apple's bitter pit and tomato's blossom end rot. Also, it can be used to correct Calcium deficiencies in strawberry, vegetables (lettuce, cucumber, pepper, etc.) citrus and fruits in general and for fruit skin treatment (apples, oranges, tomatoes, etc.).

### DOSE AND INSTRUCTIONS FOR USE

**Fertigation:** 10 cc/m<sup>3</sup> of water in normal soils and from 20 to 30 cc/m<sup>3</sup> of water in saline soils; using at least 40 L/ha per year and at most 60 L/ha per year.

**Foliar application:** Dissolve it in water using 300 cc/hl.

### APPLICATION SEASON

For persimmon, apply **ACETA PLUS** during the third treatment against *Mycosphaerella nawae* in May and it must be used with the gibberellic acid treatments to delay the autumn ripening of the fruit.

To fight apple's bitter pit start the treatment when petals fall and repeat every 15 or 20 days. For tomato, start treatments after the setting and every 15 days. For strawberry, vegetables, citrus and fruits, start treatments when Calcium deficiencies are noticed. It is recommended to repeat the application 2 or 3 times.
