

AMINON

Biostimulant that contains amino acids.

GUARANTEED RICHNESS

Total nitrogen (N): 8,5% = 10,6% m/v
Organic nitrogen (N): 8,5 % = 10,6% m/v
Total organic matter: 50% = 62,5% m/v
Free amino acids: 10% = 12,5% m/v
pH = 6,7

GENERAL FEATURES

AMINON is a **biostimulant** that contains amino acids, peptides and polypeptides. This product contains a high concentration of organic matter and organic nitrogen, as both accelerate photosynthesis, activate the crop's biological processes and induce the bud formation, the bloom and the set of the fruit. Amino acids are fundamental elements of life and they are common in vegetables, animals, etc.

When amino acids are grouped, the proteins start to form. **AMINON** contains amino acids that, when absorbed, save the plant the task of synthesizing them. These savings allow the plants to develop the proteins needed to improve their growth. **AMINON's** amino acids have proved their effectiveness in the recovery of trees affected by hail, frosts and droughts, among others.

Manufactured by:

AGROQUIMICOS Y NUTRIENTES, S.L

RECOMMENDATIONS FOR USE

Dose and instructions for use

AMINON can be used **via foliar application** by spraying it with machines used for phytosanitary applications; the dose is 200-300 cc/hl,

Fertigation; this product must be diluted in a dose-dispenser; its dose is 3-6 liters per hectare.

Application season

For **all types of crops**, it can be applied throughout the vegetative cycle, being more effective during seasons with active sap movement: such as sprouting, blooming and fruit setting.

Due to its quick absorption and immediate effects, this product has an extensive use in nurseries, horticulture and young fruit tree plantations.

Presentation

Bottles of 1 liter and drums of 5 and 20 liters.
