

AMINÓN

 **Biostimulants**

Biostimulant that contains amino acids.

GUARANTEED ANALYSIS

Total Nitrogen (N): 9% = 11,1% w/v
Organic Nitrógeno (N): 8,5%=10,6% w/v

Organic matter: 67,5% w/v
Free Amino Acids: 10% = 12,5% w/v

GENERAL FEATURES

AMINÓN is a biostimulant that contains amino acids, peptides and polypeptides. This product contains a high concentration of organic matter and organic nitrogen, as both accelerate photosynthesis, activate the crop's biological processes and induce the bud formation, the bloom and the set of the fruit. Amino acids are fundamental elements of life and they are common in vegetables, animals, etc.

When amino acids are grouped, the proteins start to form. **AMINÓN** contains amino acids that, when absorbed, save the plant the task of synthesizing them. These savings allow the plants to develop the proteins needed to improve their growth. **AMINÓN**'s amino acids have proved their effectiveness in the recovery of trees affected by hail, frosts and droughts, among others.

DOSE AND INSTRUCTIONS FOR USE

AMINON can be used **via foliar application** by spraying it using machines for phytosanitary applications; the dose is 200-300 cc/hl. **Fertigation**; this product must be diluted in a dose-dispenser; its dose is 3-4 liters per hectare and application (4 applications in total).

APPLICATION SEASON

For **all types of crops**, it can be applied throughout the vegetative cycle, being more effective during seasons with active sap movement: such as sprouting, blooming and fruit setting. Due to its quick absorption and immediate effects, this product has an extensive use in nurseries, horticulture and young fruit tree plantations.
