

BIGFOOD

Extract of marine algae with microorganisms and vegetal steroids.

GUARANTEED RICHNESS

Extract of marine algae: 20% = **23% w/v**

GENERAL FEATURES

BIGFOOD is a **natural biostimulant** made from an extract of **Ascophyllum Nodosum**, an alga. It stimulates the root development and the growth of the plant, given its content in carbohydrates.

BIGFOOD is more effective during the moments of high vegetative activity, such as post-transplant, blooming and fruit setting and fattening. **BIGFOOD** is an excellent soil conditioner and it is an organic source of macro and microelements. This product potentiates essential metabolic and physiologic processes that lead to the strengthening, growth and development of the plant. Also, **BIGFOOD** contains an extract of microorganisms and vegetal steroids that make it an excellent growth stimulator. **This is a product with a high nutritional power.**

Manufactured by:

AGROQUIMICOS Y NUTRIENTES, S.L.

RECOMMENDATIONS FOR USE

Dose

Foliar application: between 2-5 applications with a dose of 200-300 cc/hl.

Fertigation: between 2-5 application with a dose of 2-3 L/ha. The product should be applied every 15-20 days.

Application season

BIGFOOD must be applied during the moments of high vegetative activity. For vegetables, the treatment should begin during the post-transplant until the final stages of the crop. For fruit trees, the treatment should start from bud development to the fattening of the fruit.

Presentation

Bottles of 1 liter and drums of 5 and 20 liters.
