

# FERROLIFE

Liquid complex that corrects ferric chlorosis.

## GUARANTEED ANALYSIS

Iron (Fe) soluble in water : 5% = 6,4% w/v    Complexed Iron (Fe): 5% = 6,4% w/v  
Complexing agent: HEPTAGLUCONIC ACID

## GENERAL FEATURES

**FERROLIFE** is a complexed **Iron** liquid fertilizer. This product corrects Iron deficiencies and it can be used via foliar application or fertigation. Iron salts joined with Hexagluconic Acid form complexes with high stability, even for soils with high pH.

Because of its solubility, **FERROLIFE** is especially recommended to be applied in flood irrigation or drip irrigation.

## DOSE AND INSTRUCTIONS FOR USE

**Foliar application:** dilute it in water, 300-500 cc/hl and it must be sprayed using machines for phytosanitary treatments. Doses must be spread in 3 or 4 applications. **FERROLIFE** can be used in irrigation water, following the traditional methods of Iron chelate applications. If it is used via foliar application, it must be diluted in water at the specified dosage.

## APPLICATION SEASON

**Fruit-tree crops:** at the beginning of the vegetations, after the winter break.

**Vegetables, flower plants and ornamental:** throughout their vegetative cycles, whenever Iron deficiencies are first noticed.
