

LIFE CAL

CE fertilizer and corrector of Calcium deficiencies in Carbonate Suspension format.

GUARANTEED RICHNESS

Calcium Oxide (CaO) soluble in water: 35% = 58% w/v

GENERAL FEATURES

LIFE CAL is a Calcium concentrated suspension that can be used via foliar application and fertigation. When used via foliar application, this product corrects Calcium deficiencies. Also, when used in high doses, it creates a thin layer that covers the surface of the fruit or vegetables and protects them from sunburn, reducing the temperature of the tree. Therefore, this product helps to increase the photosynthetic activity.

When used **via fertigation**, this product helps to neutralize soils with a high pH and to correct soils with high conductivity. Furthermore, this product is specially advised for saline water and soils. Its use, alongside Organic Matter, balances CEC (Cation Exchange Capacity).

Manufactured by

AGROQUIMICOS Y NUTRIENTES, S.L.

RECOMMENDATIONS FOR USE

Dosage and instructions

Foliar application: sunburn protector, 2-3% per application every 3-4 weeks. **Deficiency corrector** of Calcium, 0,5-1% in 2-3 applications.

Fertigation, 30-40 L/ha in standard soils and 40-50 L/ha for acid or saline soils.

Season of application

As deficiency corrector, its use is recommended as soon as the deficiency is noticed. On the other hand, **LIFE CAL**, as soil corrector, should be spread in different irrigations throughout the vegetative cycle.
