

LIFE - pH

PH regulator for phytosanitary mixtures.

GUARANTEED RICHNESS

pH Regulator agents: 70%

GENERAL FEATURES

LIFE-pH is a **regulator** that buffers the pH to an appropriate value in order to increase the effectiveness to its highest. This product prevents the alkaline hydrolysis produced usually by some phytosanitary products.

Additionally, it **prevents the Calcium precipitation** caused foliar fertilizers containing Phosphorus. Because of its content in Ammoniac Nitrogen is recommended its application with glyphosate, in order to increase its effectiveness.

Manufactured by:

AGROQUIMICOS Y NUTRIENTES, S.L.

RECOMMENDATIONS FOR USE

Dosage

The regular dose is **100 cc/100 liters** of water. However, superior dosages can be applied without risk of phytotoxicity, but only when the indicated dosage is not enough.

Instructions for use

LIFE-pH must be dissolved in water in the spraying tank with the appropriate quantity, and later on, the other components must be added. If possible, the pH of the spray liquid tank would be checked and its value should be 6-6.5.

Presentation

Bottles of 1 liter and drums of 20 liters.
