

LIFE pH

 **Miscellanea**

pH regulator for phytosanitary mixtures.

GUARANTEED RICHNESS

pH regulator agents: 70%

GENERAL FEATURES

LIFE pH is a **regulator** that buffers the pH to an appropriate value in order to increase the effectiveness of the treatment to its highest point. This product prevents the alkaline hydrolysis produced usually by phytosanitary products.

Additionally, it **prevents the Calcium precipitation** caused foliar fertilizers containing Phosphorus. Because of its content in Ammoniacal Nitrogen, it is recommended its application with glyphosate, in order to increase its effectiveness.

DOSE AND INSTRUCTIONS FOR USE

The regular dose is **100 cc/100 liters** of water. However, superior dosages can be applied without risk of phytotoxicity, but only when the indicated dosage is not enough.

LIFE pH must be dissolved in water in the spraying tank with the appropriate quantity, and later on, the other components must be added. If possible, the pH of the spray liquid tank would be checked and its value should be 6-6.5.
