

LIFE SALT

SOLUTION OF COMPLEXED CALCIUM

GUARANTEED RICHNESS

Calcium Oxide (CaO) soluble in water: 10% = **13,28% w/v**

Calcium Oxide (CaO) complexed with LIGNOSULFONIC ACID: 10% = **13,28% w/v**

GENERAL FEATURES

LIFE SALT contains Calcium complexed with **LIGNOSULFONIC ACID**, which corrects the Calcium deficiencies in every type of crop and repairs saline soils and saline water. This product can be used via foliar application and fertigation. When absorbed through the roots, it exchanges the excess of sodium for Calcium. The process results in the release of sodium and other damaging ions, present in the crops, into the lower layers of the soil.

LIFE SALT can be used **through the roots** to help neutralise soils with high pH and to correct soils with high conductivity. Furthermore, this product contains organic matter and it balances the Cation-exchange capacity (CEC). Thus, it is advised for saline water and soils.

Manufactured by

AGROQUIMICOS Y NUTRIENTES, S.L.

RECOMMENDATIONS FOR USE

Dosage and instructions

Foliar application: the dose is 400c.c./100L of water. Repeat the process depending on the level of Calcium required.

Through the roots: when correcting saline soils: use 40-80 L/ha per year, spread through different irrigations. **When correcting saline water:** use between 25-50L/m³ of water, depending on the Electric Conductivity of the water.

Season of application

LIFE SALT can be applied anytime during the plant growth cycle. To achieve better results, please apply it during seeding or germination until the end of the plant growth cycle.

When correcting soils, it should be spread through different irrigations during the plant growth cycle.
