

LIFE SALT

Complexed Calcium solution.

GUARANTEED ANALYSIS

Calcium Oxide (CaO) soluble in water : 10% = 13,28% w/v

Calcium Oxide (CaO) complexed by Lignosulfonic Acid : 10% = 13,28% w/v

GENERAL FEATURES

LIFE SALT contains Calcium complexed using **LIGNOSULFONIC ACID**, which corrects the Calcium deficiencies in every type of crop and repairs saline soils and saline water. This product can be used via foliar application and fertigation. When absorbed through the roots, it exchanges the excess of sodium for Calcium. The process results in the release of sodium and other damaging ions, present in the crops, into the lower layers of the soil.

LIFE SALT can be used **via fertigation** to help neutralize soils with high pH and to correct soils with high conductivity. Furthermore, this product contains organic matter and it balances the Cation-exchange capacity (CEC). Thus, it is advised for saline water and soils.

DOSE AND INSTRUCTIONS FOR USE

Fertigation:

When correcting saline soils: use 40-80 L/ha per year, spread through different irrigations.

When correcting saline water: use between 25-50 cc/m³ of water, depending on the Electric Conductivity of the water.

When correcting Calcium deficiencies: Use 8-12 liters per hectare and irrigation. Use several applications according to the degree of Calcium deficiency.

Foliar application: the dose is 400c.c./100L of water. Repeat the process depending on the level of Calcium required.

APPLICATION SEASON

It can be applied throughout the vegetative cycle. To increase its efficacy, it is best applied from transplant or sprouting until the end of the vegetative cycle.
