

LIFE Zn

Liquid corrector of Zinc deficiencies.

GUARANTEED RICHNESS

Zinc (Zn) soluble in water: 9% w/w = **11,8% w/v**

Chelated Zinc (Zn): 9% w/w = **11,8% w/v**

Chelating agent: **EDTA**

GENERAL FEATURES

LIFE Zn is a liquid corrector of Zinc deficiencies that has been 100% chelated by EDTA and it can be used either **via foliar application** or **fertigation** in **Citrus, fruit-trees in general, vegetables and cereals**. It has been proven that chelated Zinc is much more effective than inorganic or complexed salts, this is why **LIFE-Zn** corrects quickly and effectively Zinc deficiencies.

RECOMMENDATIONS FOR USE

Dose and instructions for use

Foliar application: Citrus: spring treatments, 100-150 cc per 100 liters of water; summer treatments 50-75 cc per 100 liters of water.

Cereals, fruit-trees, vegetables and industrials: 2-3 treatments, 100 cc/hl

When mixing with amino acids, the dose has to be halved. This product can mixed with all types of foliar fertilizers.

Fertigation: Citrus and fruit-trees: 2 to 6 liters/hectare, taking into account the age of the tree (2-3 applications).

Cereals, vegetables and industrials: 3-6 liters/ha, spread in 2-3 applications during the first third of the crop cycle.

Application season

In citrus, it is recommended its application at the beginning of spring and summer bud-breaks.

In horticultural crops, fruit-trees in general, cereals and industrials, the application is recommended during the first third of the crop cycle.

Presentation

Bottles of 1 liter and drums of 5 and 20 liters. .
