

MOJALIFE pH

Liquid fertilizer with Potassium for foliar application

GUARANTEED RICHNESS

Potassium oxide (K₂O) soluble in water: 6%

IT DOES NOT CONTAIN CHLORINE

GENERAL FEATURES

MOJALIFE pH is a liquid fertilizer containing Potassium solubilized via Organic Acids.

MOJALIFE pH has an acidifying effect over the spraying mixtures and it reduces their superficial tension.

The Potassium in **MOJALIFE pH** increases the photosynthetic capabilities of the leaves, resulting in an increased absorption of CO₂. This process favors the migration of sugars to the reserve organs (fruits), which advances ripening, increases the fruit's size and improves their quality and color.

MOJALIFE pH, diluted following the recommended dose, contains a pH slightly acid, favoring its mixture with most phytosanitary products, without fearing an alkaline hydrolysis or unwanted precipitations.

RECOMMENDATIONS FOR USE

Dose

The normal dose is **100 to 150 c.c.** for every **100 liters of water**.

Application season

In general, use it for all types of crops (**citrus, olive trees, grapevines, vegetables, fruits in general, etc.**), its application is recommended throughout the vegetative cycle of the crop.

Presentation

Bottles of 1 liter and drums of 5 and 20 liters.
